BOROUGH of GLOSSOP

ANNUAL REPORT

of the

Medical Officer of Health

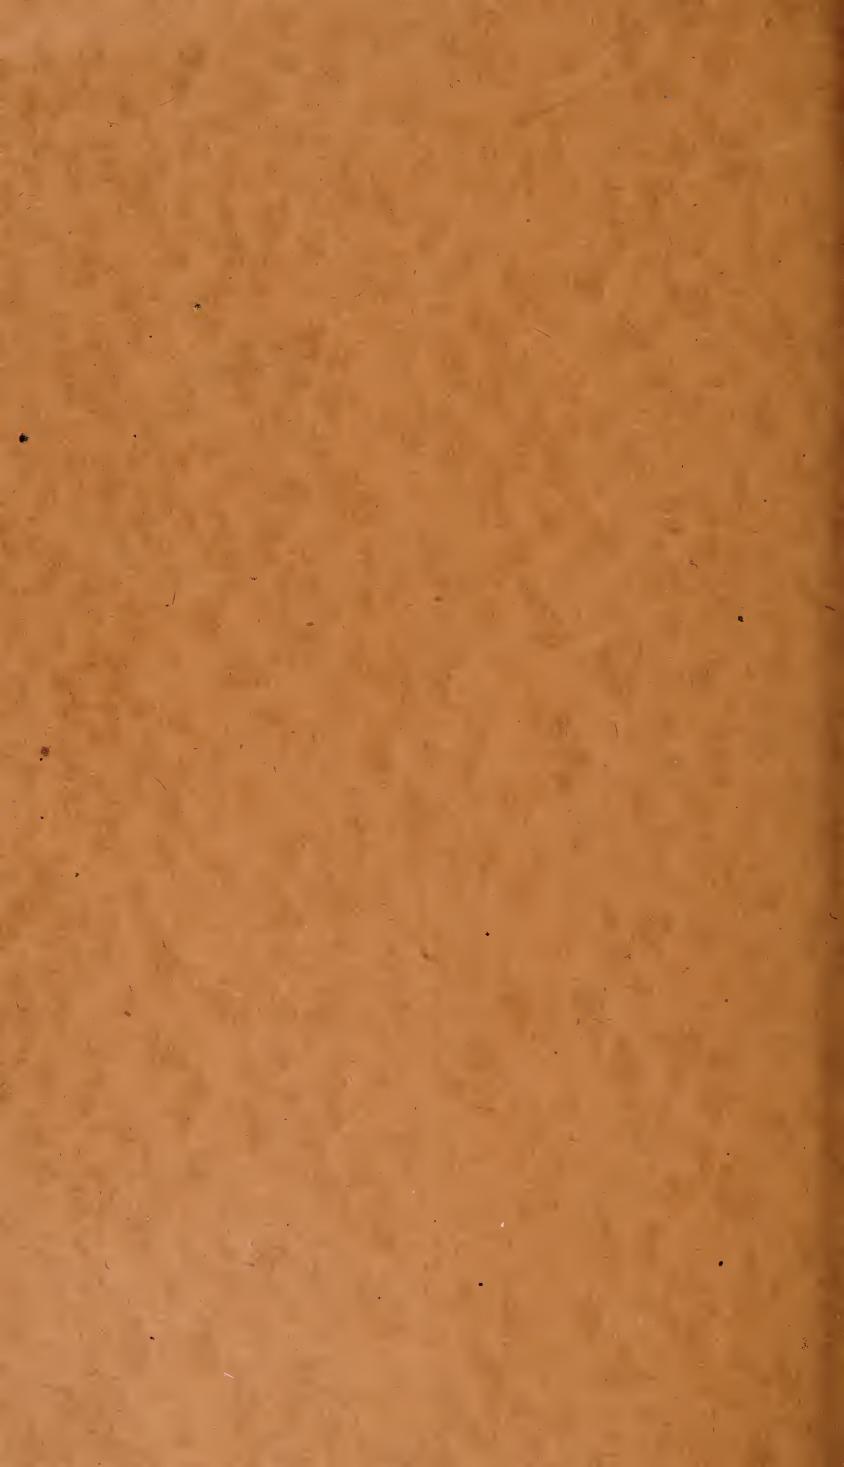

J. A. W. REID, M.B., Ch.B. D.P.H.

and

The Sanitary Inspector

E. DUNSMORE, M.R.San.I., M.S.I.A.

for the year 1950

PREFACE.

To the Minister of Health and

To the Mayor, Aldermen and Burgesses of the Borough of Glossop.

I have the honour and pleasure to submit the Annual Report on the Public Health of the Borough of Glossop for the year ending 31st December, 1950.

Dr. Cockcroft, the previous Medical Officer of Health, took up his duties as Medical Officer of Health of Worthing Rural District Council and Littlehampton Urban District Council on 1st April, 1951. As my duties commenced on 28th May, 1951, I cannot give any personal reactions to the events of the year but will have to content myself with statistical deductions.

The death rate continues at a high level due to the large proportion of old people in the Borough. When allowance is made for this bias of old age we find the standardised death rate is 12.37 which compares favourably with the death rate for England and Wales.

The infantile mortality in Glossop is 33.21, a little higher than the previous year. This figure in itself is satisfactory and can be largely attributed to the Welfare Service at the Clinic and the domiciliary work of the Health Visitors. The chief function of the Child Welfare Clinic is Health Education.

I have visited all the Schools in the area while carrying out the routine medical inspections of the scholars. The washing facilities and lavatory accommodation in the schools are insanitary, obsolete and utterly inadequate. The position has not substantially changed within the year. These conditions will destroy the elements of hygiene instilled into the children during their pre-school training at the Clinic and the Day Nursery or Nursery School. The bad and overcrowded conditions of the majority of homes from which the scholars come should be counteracted by spaciousness and good sanitation as an integral part of their education.

The introduction of the Home Help Service has been a great boon to the community in general and in particular to the old people and expecting and nursing mothers. This relieves them of household worries during confinement and sickness. It is hoped that in the near future more recruits will volunteer their services for this worthy branch of social welfare.

Throughout the year a Clean Food Campaign has been waged unceasingly by the Department. During the Health Exhibition in October a large part of the exhibits dealt with this important aspect of Public Health. Just prior to the Exhibition Dr. Cockcroft and Mr. Dunsmore addressed a large section of the food retailers, distributors and shop-keepers on the importance of clean food.

The work of the Department has increased considerably since the end of the recent war due to the consolidation of many Acts relating to Public Health. The increased burden which is placed on the shoulders of the Sanitary Inspector is doubled owing to the above factor and to incomplete staffing through the loss of the pupil Sanitary Inspector in October. As a result, the routine sanitary work is in arrears and it will be impossible to bring this up-to-date without an additional Sanitary Inspector and extra clerical assistance.

I desire to express my thanks to my Chairman, Members of the Committee, the Officials of the Borough, and the Staff for their understanding and co-operation since my appointment.

Your obedient servant,

J. A. W. REID, M.B., Ch.B., D.P.H.

Medical Officer of Health.

To the Mayor, Aldermen, Councillors and Burgesses of the Borough of Glossop.

Your Worship and Gentlemen,

As I look back on the year 1950, there is nothing to which I can point as being especially noteworthy in the field of improved sanitation.

During the year under review 61 new houses were erected in the Borough of which number 54 were part of the Municipal Housing Scheme. These fifty-four dwellings consisted of twenty two-bedroom flats and thirty-four three-bedroom houses, all at Newlands Drive, Hadfield. They were all occupied before the end of the year and this gave the best post-war figure for the number of families re-housed in the town.

It may be noted that of the fifty-four families rehoused, twenty-seven cases of overcrowding were relieved and one hundred and eighty-eight persons were concerned in such cases.

The Housing Act, 1949, was designed to encourage property owners to tackle the problem of obsolete and fast decaying dwellinghouses, but to date not a single house in Glossop has been improved under the provisions of the Act whereby owners are able to obtain substantial grants towards the cost of improvements in approved cases. There are a large number of obsolescent cottages in the district. The replacement of old heating appliances by modern fuel saving installations, hot water, bathrooms, improved sanitation and many other benefits are provided for but so far the offer fails to attract attention.

The number of insanitary houses is increasing and it becomes ever more difficult to secure the abatement of such conditions due in main to the rising cost of repairs.

There are still three hundred back-to-back houses, over three hundred and seventy single-back houses and approximately four thousand houses have no fixed bath. The number of applications on the Housing Register at the end of 1950 was 559. With a careful check this number could no doubt be reduced to perhaps 450. Of this number 120 were without separate homes, leaving roughly 330 families seeking better accommodation than they occupy at present. Is there any prospect of an early solution to this problem? It is certain that many more houses are required, but at what a price. Every conceivable step will have to be taken to reduce costs to the absolute minimum and in turn the rent. Would a greater proportion of the two-bedroom type be justified at the present time?

It has been a very busy year in many respects with extended hours of duty necessitated by the additional work of meat inspection at the Government Slaughterhouse at Stalybridge and increased housing duties. Several new Acts and Byelaws came into operation during the year. To mention a few — The Prevention of Damage by Pests Act, 1949; The Shops Act, 1950; and Local Food Byelaws.

Food Byelaws have become necessary due to the mounting number of food poisoning outbreaks in recent years. Over the country as a whole, for every outbreak in 1940, there were twenty such outbreaks during 1949, giving a total of over 1,000 outbreaks in 1949, due mainly to the increase in communal feeding.

In the House of Commons, August 1st, Mr. Webb in answer to a question stated that they were constantly entertaining applications from local authorities in need of additional slaughtering facilities, and would entertain more — it would be good thing if any local authority which had ideas about this would put in a plan to the Ministry. Glossop ought to have its own slaughterhouse and I commend this for earnest consideration.

There are other matters which I also commend for the urgent attention which they demand. In the first place I refer to the antiquated, foul and insanitary trough closets which exist at the majority of the schools in the Borough, and secondly there are over 450 foul and evil smelling waste-water closets still in existence, some of which are situate under kitchen windows, and many which are in disrepair and cannot be rectified. They are a constant source of trouble and a grave danger to health. No stone should be left unturned to get rid of all these horrible fitments of bye-gone days.

I again express my thanks to the Chairmen and Members of the various Committees, in particular Dr. Cockcroft who left Glossop early in 1951, other Officials and Staff for their help and guidance during the year.

I remain,

Your obedient Servant,

E. DUNSMORE, M.R.San.I., M.S.I.A.,

Sanitary and Housing Inspector.
Food and Drugs Inspector.
Meat and Food Inspector.
Inspector, Diseases of Animals Acts.
Officer Appointed, Explosives Acts.
Shops Inspector.
Rodent Officer.

Sanitary Inspector's Office, August, 1951.

INFANT MORTALITY

The Infant Mortality rate in 1950 was 33.21 and in 1949, 32.25. For the five years ending 1945 the rate was 44.1 and for the ten years ending 1940, 49.2.

HOSPITAL SERVICES

The local hospital services are administered by the Ashton, Hyde and Glossop Hospital Management Committee on behalf of the Manchester Regional Hospital Board. Partington Home still serves as a Maternity Unit for the area, while Wood's Hospital takes Ear, Nose and Throat cases, and convalescent cases from the District Infirmary, Ashton-under-Lyne. A Geriatric unit occupies the major part of the beds at Shire Hill, but part of the accommodation is reserved for the care of non-sick residents in the hospital. This latter function is carried out by the Derbyshire County Council who are also responsible for the personal health services in the area. These include care of mothers and young children, health visiting, home nursing, vaccination and immunisation, prevention of illness, and a domestic help service.

REFUSE COLLECTION AND DISPOSAL

A fortnightly collection of refuse is maintained throughout the district and disposal is by means of the biological process of controlled tipping.

There is no refuse destructor plant in the Borough.

The service collection and disposal is under the control of the Borough Surveyor. The Health Department inspects and services the tips for the control of rodent and insect infestations.

Section C

Sanitary Circumstances of the Area

Section C— Sanitary Circumstances of the Area

WATER

The 6,170 dwelling houses are supplied with water as follows:

(a) Direct to houses from mains 6144
(b) By means of stand-pipes (c) By means of private supply, wells, etc. 26

The Swineshaw Supply requires only the addition of lime to counteract acidity, but the Hadfield Water is treated with alumino ferric, lime and chalk and also subjected to rapid sand filtration and chlorination.

WATER SUPPLY

The Borough Water Supply is obtained from two main sources, viz: Swineshaw Reservoir and Hadfield Reservoirs which are fed by moorland streams.

Tables 1 to 5 set out details of bacteriological examinations of raw and treated water, chemical and plumbo-solvency samples.

Samples taken:-

Bacteriological	 		 	24
Chemical	 	• • •	 	1
Plumbo-solvency	 	• • •	 	2

Quality of Supply — Main Supplies:

In all but one instance, the drinking water from the Town's mains supply, was reported upon favourably. The unsatisfactory sample was taken from a tap in Messrs. Wilson & Bates Mineral Water Factory, Howard Street, Glossop. A follow-up sample taken from the same premises was reported upon as satisfactory.

Spring and Well Supplies:

Samples taken at the Cemetery Lodge during 1949 showed that the water supply was heavily polluted and contained an excessive quantity of lead. Remedial measures were carried out and a sample taken in February 1950 gave a satisfactory result (see table 3).

No work has yet been carried out to obviate contamination of the well water at Hill Top House.

As shown in Table 1, specimens were taken from (i) a cast iron pipe conveying spring water to rear of Smedley Place Cottages, Old Glossop, and (ii) a dug-well at the top of Hope Street, Old Glossop.

There was evidence of considerable fæcal pollution in both these specimens; Specimen (i) was reported as ". . . unsuitable for domestic use in its present state" and, with regard to specimen (ii) the opportunity for surface contamination from pasture land was mentioned.

Each of the four Cottages at Smedley Place have now been connected up to the Town's main with a tap over the sink and Hope Hill Cottage also will shortly be supplied from the Town's main.

SWIMMING BATHS

Sampling was again carried out at the Public Baths.

As indicated in Table 2 one sample was not considered to be satisfactory but a careful watch on the efficiency of chlorination gave satisfactory results at later dates.

(One twentieth of a grain per gallon = 0.7 parts per million)

DRAINAGE AND SEWERAGE

No important change. Extensions to new housing sites and houses built by private enterprise were made.

RIVERS AND STREAMS

The work carried out in 1949 by the Rivers Mersey and Irwell Catchment Board to alleviate flooding in the Woolleybridge and Brookfield areas has had a beneficial effect.

The installation of newer type sluice gates on the River Etherow near the Sewage Works has not yet been carried out.

SANITARY ACCOMMODATION

The approximate number of Sanitary Conveniences, Ash Bins, etc., in the Borough is as follows: Pail Closets 35, Ash Bins 4211, Ashpits 18, Waste-Water Conveniences 466, and Fresh-Water Conveniences 4,294. These figures include accommodation at farm premises.

Schools:

No improvement can be reported concerning the insanitary and obsolete sanitary arrangements at the Schools in Glossop.

KITCHEN WASTE BINS

We now have 20 Bins fixed at various positions in the Borough. These are used as receptacles for waste foodstuffs, scaps, etc. The contents are removed by various Pig Clubs, Farmers and Pigkeepers. All bins disused or causing a nuisance have been withdrawn.

NEW BUILDINGS, ALTERATIONS AND EXTENSIONS

Alterations and additions to Dwelling-houses		10
Alterations and additions to Industrial Premises	• • •	6
Other new buildings, alterations and extensions		14

DAIRIES, COWSHEDS AND MILKSHOPS

The number of distributors of milk residing in the Borough is 81. This figure is made up as follows: 42 Milkshops (retailing bottled milk) and 39 Dairies. There are also 12 persons supplying milk who reside outside the Borough.

It will be observed (Table 6) that only one nuisance in connection with dairies was discovered. This was remedied during the year.

Improvement:

During 1950 the following improvement was effected to dairy premises:—

Work.				Number.
Defective	drainage	remedied	 	 1

Wearing Apparel Brush Making			
			-
			57

BAKEHOUSES

The total number of Bakehouses in use in the Borough is 54. One hundred and twenty-nine inspections were made and 19 defects or offences recorded under the P.H. Acts, F. and D. Acts and Factories Act. Details of those dealt with other than by way of the Factories Act but included under figures relating to factories were:-

Defects or Offences.	Cases.
Limewashing overdue	6
Insanitary conditions	1
Structural defects	2
	9
	-

OFFICES

Five visits were made and the accommodation provided in each case was satisfactory.

CAMPING SITES

No applications were received for the use of sites for camping purposes.

TENTS, VANS AND SHEDS

No action was necessary.

PUBLIC HOUSES

Notice was served for the remedy of insanitary conditions at one Public House.

THE RAG FLOCK ACTS, 1911-1928

There is now no rag flock manufactured in the Borough. No samples were taken from retailers.

OFFENSIVE TRADES

There are five registered establishments, but only four are in constant use.

Eleven visits were made and two defects were recorded and remedied.

ATMOSPHERIC POLLUTION

The effort to secure a reduction in smoke emission from factory chimneys was continued but with a less number of observations.

Eight smoke observations were made during the year and in two instances the emission, in the opinion of the Sanitary Inspector, was considered to be such as to constitute a nuisance. Visits to the works and interviews with the Engineers in charge were sufficient to effect remedies.

Works of improvement have been effected at the Lancashire Chemical Works and the Gas Works at considerable expense to the Company and the N.W. Gas Board respectively.

There has been a decided reduction in atmospheric pollution from these sources.

SHOPS

Inspections have been carried out during the year and the Shops Register has been amended as necessary. It will be seen from Table (2) that there are several outstanding defects relating to shop premises. These will be followed up as soon as possible.

RATS AND MICE DESTRUCTION

Rodent Control is carried out in strict accordance with the scientific recommendations of the Ministry of Agriculture and

Fisheries under the supervision of the Sanitary Inspector.

Under the Prevention of Damage by Pests Act, 1949, the Local Authority is now responsible for the administration of the law relating to agricultural premises and seeing that infestations on such premises are dealt with.

Business firms are more than ever calling upon the Health Department service to clear their premises of rodents. The work carried out is charged for and there is no claim on the Ministry for grant.

Private dwellings are treated free to the occupier and 50% of the expense involved is claimed from the Ministry of Agriculture and Fisheries. Local Authority property, including sewers, are inspected and treated by the Health Department for which a claim for 50% of the cost is made to the Ministry.

The work of Rodent Control with its attendant records and returns has increased enormously during the last few years.

One part-time Rodent Operator is employed.

Below will be found a Summary of Surface and Sewer Infestations and Treatments for the year ended 31st December, 1950.

Table 10.

(a). Surface Infestations.

	Treated.	Cleared.
Reservoir Rat Infestations (over 200)		
Major Rat Infestations (20-200)	17	12
Minor Rat Infestations (under 20)	39	35
Mice Infestations	26	26

Where complete clearance was not effected the rat population was greatly reduced and further treatments were undertaken.

(b). Sewer Maintenance Treatments:

The manholes baited were based on 10% Test Baitings throughout the Borough.

Table 11.

VERMINOUS PREMISES

(excluding Rats and Mice)

A total of 79 rooms in 28 premises have been treated by the Health Department staff for clearance of infestations as under:—

Table 12.

Infestations.		Cases.	Treatment
Bed Bugs		12	
Fleas		1	Insecticide
Cockroaches	• • •	8	Spray or
Crickets		6	Powder
Plaster Beetles		1	

Insecticides have also been supplied to the public for treatment of small infestations, together with advice slips on how to secure clearance.

During the months of July and August, plagues of crickets on Newshaw Lane Tip were brought under control by the application of Gammexane tip dressing. A number of Council Houses in Newshaw Lane became infested and had to be treated.

DISINFECTION AND DISINFESTATION

Notifiable Infectious Disease Cases:

Under this heading the Department disinfected a total of 306 rooms in 68 dwelling houses, chiefly by formaldehyde gas or spray.

Disinfectant is supplied free for current and terminal disinfection.

Persons nursing patients are supplied with instruction leaflets and advice is given by the Sanitary Inspector. There is no steam disinfector or refuse destructor in the Borough. When steam disinfection of bedding is necessary it is carried out by arrangement with Hyde Municipal Borough.

Non-Notifiable Diseases:

Twenty rooms (in 7 houses) were treated, mainly as a precautionary measure.

Destruction of Bedding, etc.

The Corporation collected and destroyed bedding from 17 premises at the request of the responsible persons.

A standard charge is made for this service in "non-notifiable" cases.

WEATHER

(By kind permission of the Registrar General) England and Wales.

The weather in February was excessively wet. June was unusually warm, sunny and dry on the whole.

July and August were unsettled and wet. September was excessively wet with sunshine below the average.

October was dry and about the average for temperature and sunshine, but in November there was very heavy rainfall.

The year finished up with an exceptionally cold December and some heavy snowfalls.

SUMMARY OF RAINFALL

			48.85	37.61	43.76	43.58	48.32	29.80

THE EXPLOSIVES ACTS, 1875-1923

Thirty-two premises were registered for the sale of fireworks; an increase of nine over those registered in 1949.

The licence for storage of mixed explosives at the Glossop Brickworks was renewed for a further 12 months.

THE DISEASES OF ANIMALS ACT, 1894 And Orders made thereunder

No outbreaks occurred within the Borough during 1950.

Throughout Great Britain the approximate figures supplied by the Ministry of Agriculture and Fisheries for various diseases were:—

Table 13.

	Out-	Aı	Animals		
	Breaks	Attacked	Slaughtered		
Anthrax	. 344		• • •		
Foot and Mouth Disease	. 20	agriculation for	2140		
Fowl Pest		Marine	0 0 0		
Parasitic Mange			\$ * \$		
Sheep Scab	. 26		4 4 6		
Swine Fever	. 430		192		

Anthrax outbreaks were up by approx. 41% on 1949 figures.

Foot and mouth disease outbreaks were up but the total number of animals slaughtered was less than last year.

Sheep Scab outbreaks were down by almost 50% on 1949 figures.

Fowl Pest figures were less than one-third of the total for 1949.

⁺ Includes 598 Mink which died in one outbreak and two animals which died as a result of outbreaks confirmed prior to 1st January, 1950.

Swine Fever outbreaks numbered 430 against 5 in 1949; 192 animals were slaughtered.

Advice and authority for movement in respect of cattle and poultry was given by the Sanitary Inspector.

† Many other cases of overcrowding were reported on Housing Application forms, but only a survey would give a true picture.

HOUSING CONDITIONS

There are approximately 311 back to back houses and 374 single back houses in the Borough.

Approximately 4,000 houses have no fixed bath, the same number share closet accommodation and about 4,500 share common yards. A large percentage of the houses may be termed obsolescent and call for a vigorous housing programme immediately circumstances permit.

The Sanitary Inspector has continued with the work of interviewing applicants for houses and classifying their applications. At the end of 1950 there were 559 applications on the Register. Of this number 172 were without separate homes.

The key to the 100th post-war house, No. 24 Newlands Drive, was presented to the ingoing tenant by the Worshipful the Mayor, Councillor Mrs. M. L. Casey, J.P., on Saturday 14th October, 1950.

Table 15 (2) gives the record of post-war housing.

Ditto.	48	Permanent three- bedroom houses	Six occupied by 13th Aug., 1951.

Section E

Food

Section E — Food

CLEAN FOOD CAMPAIGN

The Town Council, in conjunction with the Infestation Control Division of the Ministry of Agriculture and Fisheries, organised a Health Exhibition in the Town Hall during the period 18th—24th October, 1950. This Exhibition was well received and visited by approximately 3,000 persons. This figure includes school-children from the senior schools in the Borough who attended under the supervision of their teachers. These school-children were given an address on the hygenic production of Ice-cream by the representative of a leading firm of Ice-cream manufacturers who attended the Exhibition and provided an attractive display. The children were also given a film show by the Ministry of Agriculture and Fisheries representative.

As intimated in the Annual Report for 1949, foodhandlers were addressed by the Medical Officer of Health and the Sanitary Inspector on the hygienic handling of foodstuffs. These Officials also answered questions raised by members of the sudience. The Central Office of Information provided films which were shown at this lecture; the films were "Another Case of Poisoning" and "Fly about the House." Both the Film Show and the Address were appreciated by the 'selected' audience and many of those present expressed the opinion that more information and publicity ought to be forthcoming on this important matter. Needless to say, this work has been carried on throughout the year, mainly by visits to individual premises where food is handled, and so far as circumstances permit no effort will be spared in the future in an endeavour to ensure that, so far as is humanly possible, all necessary precautions against contamination of foodstuffs will be taken by the Department.

Local Food Byelaws were adopted and became operative on the 19th March, 1950.

Two market stall holders and one shop keeper provided glass screening to the front of their counters at the request of the Sanitary Inspector.

MILK

Notes on the Milk and Dairies Regulations 1949, the Milk (Special Designations) (Raw Milk) Regulations 1949, and the Milk (Special Designations) (Pasteurised and Sterilised Milk) Regulations 1949 were included in last year's report.

Details of registrations and licences are shown in Table 16.

The special designations now authorised are:-

Tuberculin Tested.

Accredited (until 1st October, 1954).

Pasteurised.

Sterilised.

and in appropriate cases

Tuberculin Tested Milk (Pasteurised). Tuberculin Tested Milk (Sterilised).

Licences and registrations at 31st December, 1950 were as follows:—

Table 16.

(1). Licences and Supplementary Licences (Annual)

Dealers Licences	37
Supplementary "Tuberculin Tested" Milk	2
" "Pasteurised" Milk	2
" "Sterilised" Milk	1

(2). Registrations.

Distributors of milk elsewhere than from dairy farms ... 39.

Testing for Milk Fat.

No tests were carried out during 1950.

Chemical Analysis.

The Public Analyst (H. Heap, Esq.) analysed 18 formal samples of milk, 13 of which were reported genuine. Five were slightly deficient in non-fatty solids. Follow-up samples will be taken.

Cleanliness and Safety of Milk —

Details in Table below are of samples taken to ascertain cleanliness, safety and quality of milk sold within the Borough

There was a lower percentage of unsatisfactory samples than the previous year. This can perhaps be accounted for by the cooler summer months. The year 1949 being an exceptional one. On the other hand only 25 samples were examined during 1950, compared with 107 during 1949. No tubercle bacilli were found in the twelve samples submitted for biological examination. During the past ten years only one case of tubercle contaminated milk has been found.

FOOD AND DRUGS

The tables below give details of the food and drugs work for 1950, from which it will be seen that 18 formal and 20 informal samples were taken.

Table 18. (1). Samples taken — Food and Drugs Act, 1938

Article	Number	Examined	Number adulterated or otherwise giving rise to irregularity		
	Formal	Informal	Formal	Informal	
Cornflour Cream Buns Date Squares Gin (Dry) 70% proof Glycerine (Pure) Health Salt Iodine (Tincture) Jelmol Mintoes Milk Olive Oil Pepper Pepper Compound Pepper flav. Compound Sausage (Beef) Sausage (Pork) Shortcakes Soup (Tomato flavour)	18	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1	5

(2). Adulterated Samples — Food and Drugs Act, 1938

Sample No.	Article	Whether Formal, Informal, or Private	Nature of Adulteration or Irregularity	Observations
13	Milk	Formal	N.F.S.D. 0.94 per cent	Follow-up Samples to be taken
14	Milk	1.5	N.F.S.D. 4.00 per cent	— ditto —
15	Milk	† 1	N.F.S.D. 1.59 per cent	— ditto —
16	Milk	1.5	N.F.S.D. 0.24 per cent	ditto
17	Milk	1 1	N.F.S D. 0.36 per cent	— ditto —

FOOD STANDARDS AND LABELLING

No irregularities were discovered during 1950.

FOOD AND DRUGS ACT, 1938 (Section 14) Registration of Food Premises

Sixteen applications for registration under the Act were received. Fifteen were registered.

The total number of Certificates of Registration granted is now 144. The registration is in connection with premises used for the sale and manufacture of ice-cream or the preparation or the manufacture of preserved food intended for sale. These premises are required to be kept at a very high standard of cleanliness and receive special attention from the Health Department Staff.

MERCHANDISE MARKS ACT, 1926

No default was noted in 1950.

CATERING LICENCES

There is an arrangement whereby the Food Office notifies the Health Department of applications received for catering licences.

On receipt of this information the premises in question are inspected by the Sanitary Inspector and a result of findings notified to the Food Office.

FOOD POISONING

One case of bacterial food poisoning was reported during the year, but the bacteriological examination of specimen fæces sent to the Public Health Laboratory, Monsall, revealed that no organisms of the typhoid, salmonella or dysentery groups were grown.

ICE-CREAM

The sale of ice-cream increased considerably during the year under review when thirteen additional premises were registered under the Food and Drugs Act, 1938. This increase in registered ice-cream premises throws additional responsibility on the Health Department. At the time of writing fifty-six such premises are registered.

Twenty-one samples were taken and delivered by car to the Public Health Laboratory at Monsall.

A summary of the results gives the following information:

Number sampled at Shops.

Placed in Provisional Grade.

1

1

4

Number sampled at Cinema.

15

3 3 Much time and trouble is spent in investigating the reason for samples placed in the lower provisional grades in order to effect a remedy. This often entails the co-operation of the Authorities from whose district the ice-cream originated.

Ice-cream is manufactured in only one shop premises in the Borough; the remainder is brought in from outside.

It is a requirement of the Town Council that the sale of icecream is not permitted from premises selling specified "dirty" commodities such as vegetables and the standard to be attained requires the provision of modern sanitary accommodation.

MEAT AND FOOD INSPECTION

The meat allocation for this Borough continued to be made from the Government Abattoirs at Stalybridge and the Sanitary Inspector (Mr. Dunsmore) carried out duties at the Abattoir on a rota of one week in three until the 31st October 1950, when the Glossop Council then terminated the temporary arrangement due to the mounting arrears of work in the Health Department.

Allocations for Stalybridge, Glossop, Longdendale and Tintwistle are made from the Stalybridge Depot and a one hundred per cent meat inspection service is maintained.

B. — Slaughtered under M.O.F. Licence.

During the year 56 pigs were slaughtered in the Borough under Ministry of Food Licences and examined by the Sanitary Inspector. These were pig club and cottagers' pigs. The following parts were found to be unfit.

	Cond	demn	ed.		N	o.		Condition or Disease.
Heads	* * •	• • •		• • •	2 (1	only pt.	head)	Tuberculosis.

culosis	28.43	1.20		

We are indebted to the Stalybridge Health Department for supplying some data for these figures which refer to all inspections carried out by the Inspectors of Stalybridge and Glossop Authorities for the period 1st January to 31st October, 1950.

Section F

Prevalence and Control over Infectious and other Diseases

Section F— Prevalence and Control over Infectious and other Diseases

OBSERVATIONS

From the table on page 55 it will be seen that during 1950 only one case of Diphtheria was notified. In 1947, 1948 and 1949 there were nil returns for Diphtheria. Two cases of poliomyelitis were notified and sent to hospital. Both appear to be making good recoveries.

SPECIMENS SUBMITTED FOR EXAMINATION

	Positive.	Negative.
Diphtheria	—	10
Alimentary Infection		10
Hæmolytic Streptococci	7	7
Vincents Angina		6
Infective Jaundice		1

DIPHTHERIA

The number of children immunised against Diphtheria in 1950 was:—

Pre-School Children	• • •		• • •	• • •		244
School Children		• • •	• • •	• • •	• • •	19
			7	Cotal		263

Total numbers immunised:—

Age Group 0—4 (inclusive): 1045; (73.9 per cent immunised) Age Group 5—14 (inclusive): 1895; (90.9 per cent immunised)

TUBERCULOSIS

No action was necessary in 1950 under the prevention of Tuberculosis Regulations, 1925, or the Public Health Acts.

There is no change in the organisation since last year.

New Cases and Mortality during 1950

55 65 and						1		
upwards				1				
	4	1		1	2	2		

The names of all persons who died from tuberculosis had been registered prior to death as tuberculosis cases.

Is there evidence of excessive incidence of, or mortality from tuberculosis in a particular occupation of the area? No.

The Chest Clinic in Surrey Street is closed and patients now go to the Chest Clinic at Ashton for investigation and treatment.

No. 3 Mass Radiography Unit

This Unit, which is based at Shaw Heath Hospital, Stockport, visited Glossop in December, 1950, with a view to offering a free chest X-Ray to persons aged 14 years and over, resident or employed in the area.

The object of this branch of the National Health Service is the early detection and diagnosis of chest diseases, including pulmon ary tuberculosis, in order to ensure speedy treatment, and consequently greatly increase the chances of permanent cure.

The Unit operated within the Borough during the period 4th — 28th December, 1950.

NUMBERS OF PERSONS X-RAYED

	Male	Female	Totals
Public	106 111 1596	109 195 1275	215 306 28 71
То	otals 1813	1579	3 3 92

No. Recalled for large films and referred for further investigation

Schoolchildren Public Workpeople	4 5 83	(1) (—) (28)	2 13 49	(—) (8) (16)	6 18 132	(1) (8) (44)
Totals	92	(29)	64	(24)	156	(53)

INFESTATION

Children infested with lice are disinfested by means of a D.D.T. preparation.

Regarding Scabies, Benzyl Benzoate cream is used.
